

WHEN THINGS GET ROUGH

GRAPE LOADER "PUGLIA"

GRAPE LOADER "PUGLIA"

The grape loader is used for grape transport from rows to trucks during manual harvesting.

It's controlled from a tractor to which is coupled by three point hitch and faster fittings to its hydraulic system. Lifting and uploading movements are controlled from the tractor by double-effect hydraulic cylinders. The frame is built by structural square tube, to allow fast and effortless harvesting and uploading in safe conditions at the highest elevation. It is equipped with rubber wheels to avoid that all weight is burden on tractor. Tanks can be in stainless steel or painted steel with non-toxic epoxy enamel suitable for all kind of surfaces coming into contact with foods/alimentary substances. It requires very little maintenance.

Max unloading height mt.4,00
