WHEN THINGS GET ROUGH

VINEYARDS DISC HARROWS

VINEYARDS DISC HARROWS

Vineyards disc harrows are built in structural square tube specially developed for vineyard. The frame is equipped with high quality steel tines and 22' inches boron notched disc. Each tine has rubber shock absorber to prevent damages. The notched discs rotate on special fully integrated hub bearing system, greased and sealed for the life of the unit. These hub units have a flanged outer ring that is pre-drilled and tapped to accommodate a disc. The frame can be overturned for easily chancing of the rows. Low fuel consumption thanks to lower power demand.
